

# The 2nd GaNonCMOS webinar on

## The System-Level Evaluation of the GaNonCMOS Components

**Do you want to learn more about the achievements of the GaNonCMOS project?**

Then join the GaNonCMOS webinar on the system-level evaluation of the GaNonCMOS components!

In this free webinar, the partners of the EU-funded GaNonCMOS Project will share insights on the individual components developed throughout the project period and the results of their system-level evaluation.

### Agenda:

1. Introduction to GaNonCMOS and the components developed by the project
2. Magnetic components – Paul McCloskey (Tyndall)
3. Controller and driver development for higher frequency power conversion with GaN devices - Norbert Fiebig (IHP)
4. Review of key development in GaN HEMT – Fouad Benkhalifa (Fraunhofer IAF)
5. Developments in PCB embedded components – Gerald Weidinger (AT&S)
6. Electrical results with the new components - Seamus O'Driscoll (Tyndall)

### When?

25 May 2021, 14:00 – 15:00

Register via [this link](#) and join our webinar!

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 721107.
